# 5 DETAILS TO MONITOR WHEN GRANTING REMOTE ACCESS

When enabling remote access to your ERP system and making transactions available on the internet, you're going to have concerns about security — especially with high-privileged user accounts.

Here are five details you should monitor to mitigate the risks of high-privileged access and enable a rapid response to security threats.
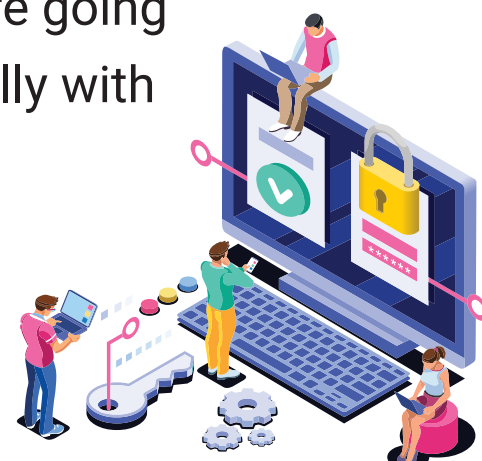

1. WHO

**Privileged vs.
non-privileged user?**

2. WHERE

**Are you seeing traffic
from a foreign country?**

3. WHEN

**Accessing
after hours?**

4. WHAT

**Salary information?
Social Security Number?**

5. HOW

**Is it a personal device
or company issued?**
